POSSIBLE TEST CASE VERDICTS:

Test case does not apply to the test object: N/A(Not applicable)

GENERAL PRODUCT INFORMATION:

Product Description -

1. Charging case which is intended to be used for audio/video, information and communication technology Equipments

Copy of Marking Plate: See on the product.

ENERGY SOURCE IDENTIFICATION AND CLASSIFICATION TABLE:

(Note 1: Identify the following six (6) energy source forms based on the origin of the energy.)

(Note 2: The identified classification e.g., ES2, TS1, should be with respect to its ability to cause pain or injury on the body or its ability to ignite a combustible material. Any energy source can be declared Class 3 as a worse case classification e.g. PS3, ES3.

Electrically-caused injury (Clause 5):

(Note: Identify type of source, list sub-assembly or circuit designation and corresponding energy source classification)

Source of electrical energy	Corresponding classification (ES)
All circuits connected to a.c. mains except for output circuits	ES3
output connector	ES3

Electrically-caused fire (Clause 6):

(Note: List sub-assembly or circuit designation and corresponding energy source classification)

Example: Battery pack (maximum 85 watts): PS2

Example: Buttery puch (maximum 05 watts).	152
Source of power or PIS	Corresponding classification (PS)
All circuits connected to a.c. mains except for output	PS3, Arcing PIS, Resistive PIS
circuits	S S
Output circuits (connector)	PS3

Injury caused by hazardous substances (Clause 7)

(Note: Specify hazardous chemicals, whether produces ozone or other chemical construction not addressed as part of

the component evaluation.)

Example: Liquid in filled component Glycol

Source of hazardous substances Corresponding chemical

Mechanically-caused injury (Clause 8)

(Note: List moving part(s), fan, special installations, etc. & corresponding MS classification based on Table 35.)

Example: Wall mount unit MS2

	Entering to the time time time	11102
1	Source of kinetic/mechanical energy	Corresponding classification (MS)
,	Mass of the unit	MS3
	Edges and corners	MS1

Thermal burn injury (Clause 9)

(Note: Identify the surface or support, and corresponding energy source classification based on type of part, location, operating temperature and contact time in Table 38.)

Example: Hand-held scanner – thermoplastic enclosure TS1

Source of thermal energy	Corresp	onding classification (TS)),9
Enclosure (Metal)	TS1	1	Y
Internal parts	TS3	43 8	47
= 44 4 7 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4	X	X	A

Radiation (Clause 10)

(Note: List the types of radiation present in the product and the corresponding energy source classification.)

Example: DVD – Class 1 Laser Product RS1

Type of radiation Corresponding classification (RS)
LED RS1

Supplementary information:

Note 1: Tma should be considered as directed by appliable requirement

Note 2: Tma is not included in assessment of Touch Temperatures (Clause 9)

1. With a specified maximum ambient temperature and test temperature of 45°C, the maximum permitted temperatures are calculated as follows: Winding components (providing safety isolation):

Class 130 (B) Tmax = 120° C - 10° C = 110° C

2. During the test, the sealing compound did not soften or melt.

6.2.2	Table: Electrical pow	Table: Electrical power sources (PS) measurements for classification									
Source	Description	Measurement	Max Power after 3 s	Max Power after 5s*	PS Classification						
Output	Normal(220V)	Power (W):	, 	8	PS3						
5	5	VA (V):	5- 5	42	The state of the s						
Y Z	24	IA (A):	- Z	R	2						

Supplementary Information:

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine PS Classification.

	6.2.3.1	Table:	Γable: Determination of Potential Ignition Sources (Arcing PIS) N/A								
	Location Open circuit		Measur	Measured r.m.s Calcu		value	Arcing PIS?				
4	voltage		cur	rent	(Vp x Irms	s)	Yes / No				
			After 3 s	(In	ms)						
			(Vp)								
	4		- 4		4	1		Arcing PIS (declare))		

Supplementary information:

An Arcing PIS requires a minimum of 50 V (peak) a.c. or d.c. An Arcing PIS is established when the product of the open circuit voltage (Vp) and normal operating condition rms current (Irms) is greater than 15.

		Single Fault)	s (W / VA)	/VA)	Yes / No	
					(Comment)	
1,5	. 7	, S	- 4	44	3	VX

Supplementary Information:

A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.

A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, or (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.
